Clear the Air

Offered in two stainless-steel designs, **Vent-A-Hood's** ARS (Air Recovery System) series features duct-free ventilation. Ideal for projects where venting to the outside is not possible, the hoods are equipped with an active canopy to capture cooking contaminants, a centrifugal blower to extract the grease, an activated carbon bed to reduce odor and a large accordion microfiber filter to eliminate smoke. **Circle No. 224**

Stay Cool

The 36-in. side-by-side built-in refrigerator from **DCS by Fisher & Paykel** combines technology and stylish design. Equipped with a humidity drawer, temperature drawer, beverage chiller and tri-sensor control system, the Energy Star-approved unit ensures more accurate regulation of temperatures for improved food preservation. Its counter-depth design features hidden hinges, measures 70 in. tall and has a refrigerator capacity of 13¹/₂ cu. ft. and a freezer capacity of 8 cu. ft. **Circle No. 225**

Small Wonder

Mr.Steam's most compact and affordable towel warmer, the W216 is part of the company's 200 Series and was designed for small spaces. Lightweight and measuring just 16 in. wide, it is made of steel, showcases sleek curved lines, comes with an integral aromatherapy oil well and is offered in polished chrome, white and oil-rubbed bronze. A digital timer is also available. **Circle No. 226**

Spit Fire

A built-in gas model for indoor use, the Broche Flamberge Rotisserie from **La Cornue** is UL-approved, requires no built-in ventilation and calls for only 120V of power. Measuring 32 in. sq. and 18 in. deep, it can be built into a cabinet (thanks to improved insulation and air circulation, which prevents its surface temperature from exceeding 151 degrees Fahrenheit), features a rear wall of solid cast iron that is heated by a 27,000-Btu gas burner and comes in 27 standard colors, which can be accented with a choice of nine trim options. Custom colors and ID plate engravings are also available. **Circle No. 227**
